

ECOLOGICAL ASPECT OF PANELTIM® PRODUCTS

- ◆ The Paneltim® products are made of Polypropylene copolymer (PP copo) or high density Polyethylene (HDPE).
- ◆ Cradle to Cradle aspect:
 - The panels are 100% recyclable: the closed structure (no internal pollution) and one component raw material (PP or HDPE), facilitate the recyclability.
 - 50% of all the panels that Paneltim NV produces, are made from 100% recycled materials.
- ◆ With the purchase of recycled materials, there is a systematical control on the presence / absence of heavy metal or toxic additives in internal or external labs.
- ◆ Rest parts during the production or local manipulation can be recycled by Paneltim NV or by external recycling companies.
- ◆ Paneltim® panels always keep their raw material rest value because of their recyclability.
- ◆ With a unique production process, Paneltim NV takes care of the environment and makes its contribution towards sustainable development.
